

Black Hole Pipeline instructions

step 1

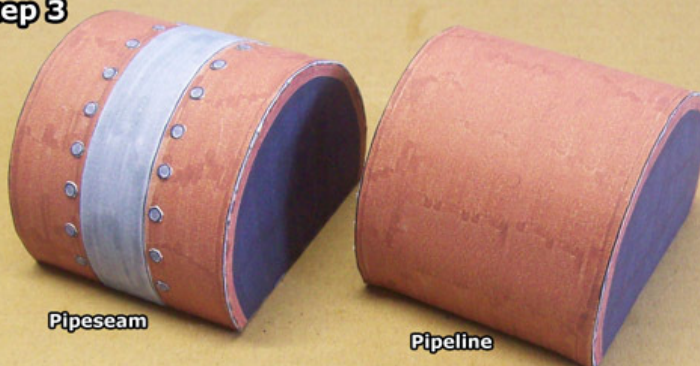

Although you can use any tools you like of course, this is a simple model so all you really need is a knife, glue and a good cutting surface.

step 2

Step 1 is to cut out and pre-shape part 1, then glue the loose end of the brown strip to the white base and then fold up and glue on the sides.

step 3

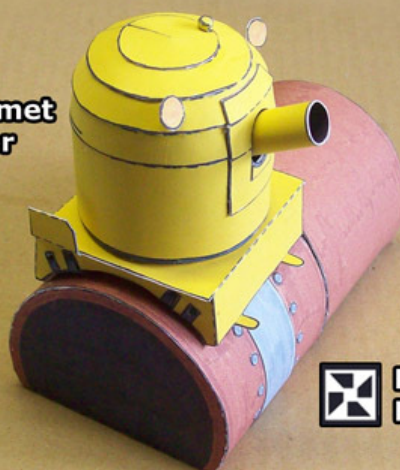

In fact, it's the only step you need to do on a papercraft Pipeline model; for a Pipeseam, you will also need to glue on the seam itself, and the 26 bolts (parts 2 and 3).

step 4

Yellow Comet Piperunner

Black Hole Pipeline

Thank you for building a Ninjatoes' papercraft model!
